

Weather Data

Weather data source for demand forecasting, scenario analysis, machine learning, financial forecasting

Cloud-Sliver

REIMAGINE YOUR APPS

Problem

- + Weather data is required for many business functions and applications
- + Consistent weather assumptions must be made across multiple business processes and applications
- + Required weather data may need to be integrated from multiple data sources

Why Cloud-Sliver

Cloud-Sliver delivered weather data management system with System Oriented Programming.

Integrates data from multiple data sources and reconciles the sources for a consistent data view.

Data accessible both interactively and programmatically via web APIs.

Insures consistent weather assumptions across business processes and applications.

Solution

Weather data management system

Integrates data from multiple data sources

Provides data at multiple levels of time granularity (5-minute, hourly, daily, weekly, monthly)

Data accessible via interactive graphical user interface(s) as well as application programming interface(s) API

IMPACT

Increased consistency across business processes.

Increased quality and consistency in analysis and forecasting processes and applications.
